Mr. Mark Schmidt
Ohio Environmental
Protection Agency
2110 E. Aurora Road
Twinsburg, Ohio 44087

Dear Mr. Schmidt:

As I discussed with you last week, I have been contacted regarding the disposal of insulation containing asbestos at the Inland Reclamation, Inc. sanitary landfill. I am, therefore, requesting authorization from your office to accept and dispose of such materials in accordance with the following method of disposal.

All personnel handling or coming in contact with the material will wear approved respirators and be educated as to the proper handling of the material.

The material will be wetted down at the job site and packed in double plastic bags having a minimum thickness of five mil.

The bags will then be loaded into steel or fibre drums having labels acknowledging that the drums contain asbestos. The drums will then be stacked in 40 yard refuse containers and transported to the landfill.

Once at the landfill, the truck will proceed to the working face. The drums will be discharged onto compacted refuse away from all other incoming trucks or equipment and then covered with approximately three feet of earth.

We will have a 2,000 and/or 5,000 gallon water truck at the dump site to quickly wet down any drums in the event of a rupture.

I would appreciate your attention to this matter and also any suggestions or specific instructions that you may have. I will contact you in the upcoming week to further discuss this request.

Respectfully submitted,

Frank Palladino, Jr.
Frank Palladino, Jr.
Comptroller
